Automation Practice

Web Tables Practice

Practice testing web tables with sorting, filtering, pagination, and various data assertions.

What you can practice here

A free web table with 15 employee records to automate with Selenium, Cypress, or Playwright. No sign-up, no rate limits.

- + The table ships without data-cy hooks, so you locate rows and cells with XPath, CSS, or text matching, the same way you would on a real application.
- + Sorting, search, dropdown filters, and pagination work together, so combined filters and filtered pagination are both testable.

The summary values are computed from the filtered rows, so your assertions depend on the table.

Testing Instructions

Test Scenarios:

- Assert table has correct number of rows
- Test column sorting (asc/desc)

Challenge:

The table has no data-cy attributes! Figure out how to locate and assert table elements on your own.
